# Babel support for the German language (new orthography)

Johannes Braams Bernd Raichle Walter Schmidt Jürgen Spitzmüller\*

v2.10dev (2016/11/05)

#### Abstract

This manual documents the babel language definition file ngermanb.ldf for German (new orthography). The file is part of the babel-german bundle.

### 1 Aim and usage

The file ngermanb.ldf provides the babel package with all language definition macros (language specific strings and settings) for the German language, including the Austrian and Swiss varieties of German. Furthermore, it assures that the correct hyphenation patterns for the respective language or variety are used.¹ The file adheres to the reformed (1996 ff.) orthography. For traditional (1901–1996) German orthography support, please refer to the complementary germanb.ldf file.

In order to use the language definitions provided here, you need to use the babel package and pass the respective language name as an option, either of

- \usepackage[ngerman]{babel}
- \usepackage[naustrian]{babel}
- \usepackage[nswissgerman]{babel}

Using multiple varieties in parallel is possible; consult the babel manual [2] for details.

#### 2 Shorthands

For all three varieties of German, the character " is made active in order to provide some shorthand macros for frequently used special characters as well as for better control of hyphenation, line breaks and ligatures. Table 1 provides an overview of the shorthands that are provided by ngermanb.ldf.

 $<sup>{\</sup>rm *Current\ maintainer.\ Please\ report\ issues\ via\ https://github.com/jspitz/babel-german.}$ 

<sup>&</sup>lt;sup>1</sup>The file ngermanb.ldf started as a re-implementation of the package ngerman.sty by Bernd Raichle (cf. [4]), which itself builds on german.sty, originally developed by Hubert Partl (cf. [3]) and later maintained by Bernd Raichle as well. The re-implementation was done by Johannes Braams.

Table 1: The extra definitions made by ngermanb.ldf

- "a Umlaut (ä) (shorthand for \"a). Similar shorthands are available for all other lowerand uppercase vowels (umlauts: "a, "o, "u, "A, "0, "U; tremata: "e, "i, "E, "I).
- "s German  $\langle \mathfrak{G} \rangle$  (shorthand for \ss{}).
- "z German  $\langle \beta \rangle$  (shorthand for \ss{}). The difference to "s is the uppercase version.
- "S \uppercase{"s}, typeset as  $\langle SS \rangle (\langle \mathcal{B} \rangle)$  must be written as  $\langle SS \rangle$  in uppercase writing).
- "Z \uppercase{"z}, typeset as  $\langle SZ \rangle$ . In traditional spelling,  $\langle \mathfrak{B} \rangle$  could also be written as  $\langle SZ \rangle$  instead of  $\langle SS \rangle$  in uppercase writing. Note that, with reformed orthography, the  $\langle SZ \rangle$  variant has been deprecated in favour of  $\langle SS \rangle$  only.
- "| Disable ligature at this position (e.g., at morpheme boundaries, as in Auf" | lage).
- "- An additional breakpoint that does still allow for hyphenation at the breakpoints preset in the hyphenation patterns (as opposed to \-).
- "= An explicit hyphen with a breakpoint, allowing for hyphenation at the other points preset in the hyphenation patterns (as opposed to plain -); useful for long compounds such as IT"=Dienstleisterinnen.
- "~ An explicit hyphen without a breakpoint. Useful for cases where the hyphen should stick at the following syllable, e.g., bergauf und "~ab.
- "" A breakpoint that does not output a hyphen if the line break is performed (consider parenthetical extensions as in (pseudo"~)" "wissenschaftlich).

New feature in v. 2.9!

- / A slash that allows for a linebreak. As opposed to \slash{}, hyphenation at the breakpoints preset in the hyphenation patterns is still allowed.
- "' German left double quotes  $\langle , \rangle$ .
- "' German right double quotes  $\langle$ " $\rangle$ .
- "< French/Swiss left double quotes («).
- "> French/Swiss right double quotes  $\langle w \rangle$ .

Table 2 lists some babel macros for quotation marks that might be used as an alternative to the quotation mark shorthands provided by ngermanb.ldf.

Table 2: Alternative commands for quotation marks (provided by babel)

\glqq	German left double quotes $\langle ", " \rangle$ .
\grqq	German right double quotes $\langle " \rangle$ .
\glq	German left single quotes $\langle , \rangle$ .
\grq	German right single quotes $\langle \cdot \rangle$ .
\flqq	French/Swiss left double quotes $\langle « \rangle$ .
\frqq	French/Swiss right double quotes (»).
\flq	French/Swiss left single quotes $\langle \epsilon \rangle$ .
\frq	French/Swiss right single quotes $\langle \rangle$ .
\dq	The straight quotation mark character $\langle " \rangle$ .

## **3 Implementation**

#### 3.1 General settings

First, we define some helper macros that help us to identify later on which variety of German we are currently dealing with.

```
1 \def\bbl@opt@ngerman{ngerman}
2 \def\bbl@opt@ngermanb{ngermanb}
3 \def\bbl@opt@naustrian{naustrian}
4 \def\bbl@opt@nswissgerman{nswissgerman}
```

If ngermanb.ldf is read via the deprecated babel option ngermanb, we make it behave as if ngerman was specified.

```
5 \ifx\CurrentOption\bbl@opt@ngermanb
6 \def\CurrentOption{ngerman}
7 \fi
```

The macro \LdfInit takes care of preventing that this file is loaded more than once with the same option, checking the category code of the @ sign, etc.

```
8 \LdfInit\CurrentOption{captions\CurrentOption}
```

If ngermanb.ldf is read as an option, i.e., by the \usepackage command, ngerman could be an 'unknown' language, so we have to make it known. We check for the existence of \l@ngerman and issue a warning if it is unknown.

```
9 \ifx\l@ngerman\@undefined
10 \@nopatterns{German (new orthography)}
11 \adddialect\l@ngerman0
12 \fi
```

We set naustrian and nswissgerman as dialects of ngerman, since they use the same hyphenation patterns than ngerman. If no ngerman patterns are found, we issue a warning.

```
13 \ifx\CurrentOption\bbl@opt@naustrian
   \ifx\l@ngerman\@undefined
      \@nopatterns{German (new orthography), needed by Austrian (new orthography)}
      \adddialect\l@naustrian0
17
      \adddialect\l@naustrian\l@ngerman
18
19
20\fi
21 \ifx\CurrentOption\bbl@opt@nswissgerman
   \ifx\l@ngerman\@undefined
      \@nopatterns{German (new orthography), needed by Swiss German (new orthography)}
23
      \adddialect\l@nswissgerman0
24
25
     \adddialect\l@nswissgerman\l@ngerman
26
27 \fi
28\fi
```

#### 3.2 Language-specific strings (captions)

The next step consists of defining macros that provide language specific strings and settings.

\@captionsngerman

The macro \@captionsngerman defines all strings used in the four standard document classes provided with LaTeX for German. This is an internal macro that is inherited and modified by the following macros for the respective language varieties.

```
29 \@namedef{@captionsngerman}{%
_{30} \def\prefacename{Vorwort}%
    \def\refname{Literatur}%
    \def\abstractname{Zusammenfassung}%
    \def\bibname{Literaturverzeichnis}%
34 \def\chaptername{Kapitel}%
    \def\appendixname{Anhang}%
35
   \def\contentsname{Inhaltsverzeichnis}%
                                                % oder nur: Inhalt
_{37} \quad \verb|\def|\listfigurename{Abbildungsverzeichnis}| %
38 \def\listtablename{Tabellenverzeichnis}%
39 \def\indexname{Index}%
_{40} \quad \verb|\def\figurename{Abbildung}| %
_{4^{1}} \def\tablename{Tabelle}%
                                                % oder: Tafel
42 \def\partname{Teil}%
_{43} \ \def\enclname{Anlage(n)}%
    \def\ccname{Verteiler}%
                                                % oder: Kopien an
44
    \def\headtoname{An}%
45
    \def\pagename{Seite}%
    \def\seename{siehe}%
47
    \def\alsoname{siehe auch}%
    \def\proofname{Beweis}%
    \def\glossaryname{Glossar}%
```

\captionsngerman

The macro \captionsngerman is identical to \@captionsngerman, but only defined if ngerman is requested.

```
52 \ifx\CurrentOption\bbl@opt@ngerman
53 \@namedef{captionsngerman}{%
54 \@nameuse{@captionsngerman}%
55 }
56 \fi
```

\captionsnaustrian

The macro \captionsnaustrian builds on \@captionsngerman, but redefines some strings following Austrian conventions (for the respective variants, cf. [1]). It is only defined if naustrian is requested.

```
57\ifx\CurrentOption\bbl@opt@naustrian
58 \@namedef{captionsnaustrian}{%
59 \@nameuse{@captionsngerman}%
60 \def\enclname{Beilage(n)}%
61 }
62\fi
```

\captionsnswissgerman

The macro \captionsnswissgerman builds on \@captionsngerman, but redefines some strings following Swiss conventions (for the respective variants, cf. [1]). It is only defined if nswissgerman is requested.

```
63\ifx\CurrentOption\bbl@opt@nswissgerman
64 \@namedef{captionsnswissgerman}{%
65 \@nameuse{@captionsngerman}%
66 \def\enclname{Beilage(n)}%
67 }
68\fi
```

#### 3.3 Date localizations

\month@ngerman

The macro \month@ngerman defines German month names for all varieties.

```
69 \def\month@ngerman{\ifcase\month\or
70 Januar\or Februar\or M\"arz\or April\or Mai\or Juni\or
71 Juli\or August\or September\or Oktober\or November\or Dezember\fi}
```

\datengerman

The macro \datengerman redefines the command \today to produce German dates. It is only defined if ngerman is requested.

\datenswissgerman

The macro \datenswissgerman does the same for Swiss German dates. The result is identical to German. This macro is only defined if nswissgerman is requested.

```
76\ifx\CurrentOption\bbl@opt@nswissgerman
77 \def\datenswissgerman{\def\today{\number\day.~\month@ngerman
78 \space\number\year}}
79\fi
```

\datenaustrian

The macro \datenaustrian redefines the command \today to produce Austrian versions of the German dates. Here, the naming of January ("Jänner") differs from the other German varieties. The macro is only defined if naustrian is requested.

#### 3.4 Extras

\extrasnaustrian
\extrasnswissgerman
\extrasngerman
\noextrasnaustrian
\noextrasnswissgerman
\noextrasnswissgerman

The macros \extrasngerman, \extrasnaustrian and \extrasnswissgerman, respectively, will perform all the extra definitions needed for the German language or the respective variety. The macro \noextrasngerman is used to cancel the actions of \extrasngerman. \noextrasnaustrian and \noextrasnswissgerman behave analoguously.

First, the character " is declared active for all German varieties. This is done once, later on its definition may vary.

```
84 \in \mathbb{C}^{3}
```

Depending on the option with which the language definition file has been loaded, the macro \extrasngerman, \extrasnaustrian or \extrasnswissgerman is defined. Each of those is identical: they load the shorthands defined below and activate the "character.

```
85 \@namedef{extras\CurrentOption}{%
86  \languageshorthands{ngerman}}
87 \expandafter\addto\csname extras\CurrentOption\endcsname{%
88  \bbl@activate{"}}
```

Next, again depending on the option with which the language definition file has been loaded, the macro \noextrasngerman, \noextrasnaustrian or \noextrasnswissgerman is defined. These deactivate the "character and thus turn the shorthands off again outside of the respective variety.

```
89 \expandafter\addto\csname noextras\CurrentOption\endcsname{%
90 \bbl@deactivate{"}}
```

In order for TEX to be able to hyphenate German words which contain 'ß' (in the 0T1 position ^^Y) we have to give the character a nonzero \lccode (see Appendix H, the TEXbook).

```
91\expandafter\addto\csname extras\CurrentOption\endcsname{%
92 \babel@savevariable{\lccode25}%
93 \lccode25=25}
```

The umlaut accent macro \" is changed to lower the umlaut dots. The redefinition is done with the help of \umlautlow.

```
94\expandafter\addto\csname extras\CurrentOption\endcsname{%
95 \babel@save\"\umlautlow}
96\expandafter\addto\csname noextras\CurrentOption\endcsname{%
97 \umlauthiqh}
```

The current version of the 'new' German hyphenation patterns (dehyphn.tex) is to be used with \lefthyphenmin and \righthyphenmin set to 2.

```
98 \providehyphenmins{\CurrentOption}{\tw@\tw@}
```

For German texts we need to assure that \frenchspacing is turned on.

```
99\expandafter\addto\csname extras\CurrentOption\endcsname{%
100 \bbl@frenchspacing}
101\expandafter\addto\csname noextras\CurrentOption\endcsname{%
102 \bbl@nonfrenchspacing}
```

#### 3.5 Active characters, macros & shorthands

The following code is necessary because we need an extra active character. This character is then used as indicated in table 1.

In order to be able to define the function of ", we first define a couple of 'support' macros.

\dq We save the original double quotation mark character in \dq to keep it available, the math accent \" can now be typed as ".

```
103 \begingroup \catcode'\"12
```

```
105 \def\@SS{\mathchar"7019 }
        \def\dq{"}}
107 \X
        Now we can define the doublequote shorthands: the umlauts,
108 \end{are@shorthand{ngerman}{"a}{\text{rmath}}"{a}\allowhyphens}{\dot a}}
\label{lowhyphens} $$ \log \end{0.05} $$ \operatorname{constant}(0) \operatorname{constant}(0) \end{0.05} $$ on $$ 
110 \declare@shorthand{ngerman{"u}{\textormath{\"{u}}allowhyphens}{\ddot u}}
111 \declare@shorthand{ngerman}{"A}{\text{A}}\declare@shorthand{ngerman}{"A}}
\label{lowhyphens} $$112 \declare@shorthand{ngerman}{"0}{\text{\textormath}}^{"0}\allowhyphens}{\dot 0}$
\label{lowhyphens} $$113 \leq e^{\sinh(\eta)} {\textormath} ^{U}\allowhyphens} {\dot U}$$
115 \declare@shorthand{ngerman}{"E}{\text{E}}} {\ddot E}}
\label{limits} \begin{tabular}{l} $116 \declare@shorthand \{ngerman\} {"i} {\text{textormath} \{\i\}} \% \end{tabular}
                                                                    {\ddot\imath}}
\label{lem:initial} $$118 \declare@shorthand{ngerman}{"I}{\text{\constant}}{\label{lem:initial}} $$
German ß,
119 \declare@shorthand{ngerman}{"s}{\textormath{\ss}{\@SS{}}}
120 \declare@shorthand{ngerman}{"S}{\SS}
122 \declare@shorthand{ngerman}{"Z}{SZ}
German and French/Swiss quotation marks,
123 \declare@shorthand{ngerman}{"'}{\glqq}
124 \declare@shorthand{ngerman}{"'}{\grqq}
125 \declare@shorthand{ngerman}{"<}{\flqq}</pre>
126 \declare@shorthand{ngerman}{">}{\frqq}
and some additional commands (hyphenation, line breaking and ligature control):
127 \declare@shorthand{ngerman}{"-}{\nobreak\-\bbl@allowhyphens}
128 \declare@shorthand{ngerman}{"|}{%
         \textormath{\penalty(@M\discretionary{-}{}{\kern.03em}\%}
                                   \allowhyphens}{}}
{\tt 131 \backslash declare@shorthand\{ngerman\}\{""\}\{\backslash hskip\backslash z@skip\}}
{\tt 133 \backslash declare@shorthand \{ngerman\} \{"=\} \{\backslash penalty \backslash @M-\hskip \backslash z@skip\}}
{\scriptstyle 134\, \backslash} declare@shorthand \{ngerman\} \{"/\} \{\backslash textormath\} \}
        {\bbl@allowhyphens\discretionary{/}{}{/}\bbl@allowhyphens}{}}
All that's left to do now is to define a couple of commands for reasons of compatibility
with german.sty.
136 \def\mdqon{\shorthandon{"}}
_{137} \def\mdqoff{\shorthandoff{"}}
```

The macro \ldf@finish takes care of looking for a configuration file, setting the main language to be switched on at \begin{document} and resetting the category code of @ to its original value.

```
_{138}\ \ldf@finish\CurrentOption
```

\mdqon \mdqoff 104 \def\x{\endaroup

#### 3.6 naustrian.ldf, ngerman.ldf and nswissgerman.ldf

Babel expects a  $\langle lang \rangle$ .ldf file for each  $\langle lang \rangle$ . So we create portmanteau ldf files for naustrian, ngerman and nswissgerman.² These files themselves only load ngermanb.ldf, which does the real work:

139 \input ngermanb.ldf\relax

# **Change History**

Version 2.6f	Do not use \@namedef when
General: Renamed from germanb.ldf;	\noextras is already defined and
language names changed from	should not be overwritten 6
german and austrian to ngerman	\noextrasnswissgerman: Added
and naustrian 1	\noextrasnswissgerman 5
Version 2.6j	General: Added support for variety
\noextrasngerman: Deactivate	nswissgerman 1
shorthands outside of German 6	Generate portmanteau files
Version 2.6k	naustrian.ldf,ngerman.ldf and
\@captionsngerman: Added	nswissgerman.ldf8
\glossaryname4	Revised naustrian support 1
\noextrasngerman: Now use	Revised documentation: Turn the
\providehyphenmins to provide a	babel manual chapter into a
default value 6	self-enclosed manual
Version 2.6m	Version 2.8
\noextrasngerman: Turn frenchspacing	\@captionsngerman: Define
on, as in german.sty6	trans-variational base captions
Version 2.6n	which are loaded and modified by
\@captionsngerman: Corrected typo	the varieties 4
\captionnsgerman 4	\captionsnaustrian: Only define
Version 2.7	\captionsnaustrian if naustrian
\@captionsngerman: Changed	is requested 4
\enclname in naustrian to	\captionsngerman: Only define
Beilage(n) 4	\captionsngerman if ngerman is
Split \captionsngerman from	requested 4
\captionsnaustrian and	\captionsnswissgerman: Only define
\captionsnswissgerman 4	\captionsnswissgerman if
\datenswissgerman: Added	nswissgerman is requested 5
\datenswissgerman 5	\datenaustrian: Only define
\extrasnswissgerman: Added	\datenaustrian if naustrian is
\extrasnswissgerman 5	requested 5
\noextrasngerman: Deactivate	\datengerman: Only define
shorthands also outside of	\datengerman if ngerman is
naustrian and nswissgerman 6	requested 5

<sup>&</sup>lt;sup>2</sup>For some naustrian and ngerman, this is not strictly necessary, since babel provides aliases for these languages (pointing to ngermanb). However, since babel does not officially support these aliases anymore after the language definition files have been separated from the core, we provide the whole range of ldf files for the sake of completeness.

\datenswissgerman: Only define	Do not attempt to load
\datenswissgerman if nswissgerman is requested 5	\l@naustrian or \l@nswissgerman, which do not exist
General: Only add dialects if the respective variety is loaded 3	Version 2.10
Version 2.9 General: Add "/ shortcut for breakable	General: Add helper macros to identify the current option 3
slash (taken from dutch.ldf) 7	Improvements to the manual
