Babel support for the German language (new orthography)

Johannes Braams Bernd Raichle Walter Schmidt Jürgen Spitzmüller*

v2.9dev (2016/11/02)

Abstract

This manual documents the babel language definition file ngermanb.ldf for German (new orthography). The file is part of the babel-german bundle.

1 Aim and usage

The file ngermanb.ldf provides the babel package with all language definition macros (language specific strings and settings) for the German language, including the Austrian and Swiss varieties of German. Furthermore, it assures that the correct hyphenation patterns for the respective language or variety are used.¹ The file adheres to the reformed (1996 ff.) orthography. For traditional (1901–1996) German orthography support, please refer to the complementary germanb.ldf file.

In order to use the language definitions provided here, you need to use the babel package and pass the respective language name as an option, either of

- \usepackage[ngerman]{babel}
- \usepackage[naustrian]{babel}
- \usepackage[nswissgerman]{babel}

Please consult the babel manual [2] for details.

2 Shorthands

For all three varieties of German, the character " is made active in order to provide some shorthand macros for frequently used special characters as well for better control of hyphenation, line breaks and ligatures. Table 1 provides an overview of the shorthands that are provided by ngermanb.ldf.

 $^{{\}rm *Current\ maintainer.\ Please\ report\ issues\ via\ https://github.com/jspitz/babel-german.}$

¹The file ngermanb.ldf started as a re-implementation of the package ngerman.sty by Bernd Raichle (cf. [4]), which itself builds on german.sty, originally developed by Hubert Partl (cf. [3]) and later maintained by Bernd Raichle as well. The re-implementation was done by Johannes Braams.

- "a Umlaut $\langle \ddot{a} \rangle$ (shorthand for \"a). Similar shorthands are available for all other lower-and uppercase vowels (umlauts: "a, "o, "u, "A, "0, "U; tremata: "e, "i, "E, "I).
- "s German $\langle \mathfrak{G} \rangle$ (shorthand for \ss{}).
- "z German $\langle \beta \rangle$ (shorthand for \ss{}). The difference to "s is the uppercase version.
- "S \uppercase{"s}, typeset as $\langle SS \rangle (\langle B \rangle)$ must be written as $\langle SS \rangle$ in uppercase writing).
- "Z \uppercase{"z}, typeset as $\langle SZ \rangle$. In traditional spelling, $\langle B \rangle$ could also be written as $\langle SZ \rangle$ instead of $\langle SS \rangle$ in uppercase writing. Note that, with reformed orthography, the $\langle SZ \rangle$ variant has been deprecated in favour of $\langle SS \rangle$ only.
- "| Disable ligature at this position (e.g., at morpheme boundaries, as in Auf"|lage).
- "- An additional breakpoint that does still allow for hyphenation at the breakpoints preset in the hyphenation patterns (as opposed to \-).
- "" A breakpoint that does not output a hyphen if the line break is performed (useful for compound words with hyphen, e. g., (Un-) ""Sinn).
- "~ An explicit hyphen without a breakpoint. Useful for cases where the hyphen should stick at the following word, e.g., bergauf und "~ab.
- "= An explicit hyphen with a breakpoint, allowing for hyphenation at the other points preset in the hyphenation patterns (as opposed to plain -); useful for long compounds.
- New feature in v. 2.9!
- / A slash that allows for a linebreak. As opposed to \slash{}, hyphenation at the breakpoints preset in the hyphenation patterns is still allowed.
- "' German left double quotes $\langle ", \rangle$.
- "' German right double quotes (").
- "< French/Swiss left double quotes $\langle \alpha \rangle$.
- "> French/Swiss right double quotes \(\sigma \).

Table 2 lists some babel macros for quotation marks that might be used as an alternative to the quotation mark shorthands provided by ngermanb.ldf.

Table 2: Alternative commands for quotation marks (provided by babel)

\glqq	German left double quotes $\langle " \rangle$.
\grqq	German right double quotes (").
\glq	German left single quotes ⟨,⟩.
\grq	German right single quotes $\langle ` \rangle$.
\flqq	French/Swiss left double quotes $\langle w \rangle$.
\frqq	French/Swiss right double quotes $\langle * \rangle$.
\flq	French/Swiss left single quotes $\langle \cdot \rangle$.
\frq	French/Swiss right single quotes $\langle \rangle$.
\dq	The straight quotation mark character $\langle " \rangle$.

3 Implementation

3.1 General settings

If ngermanb.ldf is read via the babel option ngermanb, we make it behave as if ngerman was specified.

```
1 \def\bbl@tempa{ngermanb}
2 \ifx\CurrentOption\bbl@tempa
3 \def\CurrentOption{ngerman}
4 \fi
```

The macro \LdfInit takes care of preventing that this file is loaded more than once, checking the category code of the @ sign, etc.

```
5 \LdfInit\CurrentOption{captions\CurrentOption}
```

If ngermanb.ldf is read as an option, i.e., by the \usepackage command, ngerman will be an 'unknown' language, so we have to make it known. We check for the existence of \l@ngerman to see whether we have to do something here.

```
6 \ifx\l@ngerman\@undefined
7 \@nopatterns{German (new orthography)}
8 \adddialect\l@ngerman0
9 \fi
```

We set naustrian and nswissgerman as dialects of ngerman, since they use the same hyphenation patterns than ngerman.

```
10 \def\bbl@tempa{naustrian}
11 \ifx\CurrentOption\bbl@tempa
                    \ifx\l@naustrian\@undefined

32
33\fi
```

Language-specific strings (captions)

The next step consists of defining macros that provide language specific strings and settings.

\@captionsngerman

The macro \@captionsngerman defines all strings used in the four standard document classes provided with LATEX for German. This is an internal macro that is inherited and modified by the following macros for the respective language varieties.

```
34 \@namedef{@captionsngerman}{%
                    35 \def\prefacename{Vorwort}%
                        \def\refname{Literatur}%
                    36
                        \def\abstractname{Zusammenfassung}%
                    37
                         \def\bibname{Literaturverzeichnis}%
                    38
                         \def\chaptername{Kapitel}%
                    39
                         \def\appendixname{Anhang}%
                         \def\contentsname{Inhaltsverzeichnis}%
                                                                   % oder nur: Inhalt
                         \def\listfigurename{Abbildungsverzeichnis}%
                         \def\listtablename{Tabellenverzeichnis}%
                         \def\indexname{Index}%
                        \def\figurename{Abbildung}%
                        \def\tablename{Tabelle}%
                                                                   % oder: Tafel
                    46
                        \def\partname{Teil}%
                    47
                        \def\enclname{Anlage(n)}%
                    48
                        \def\ccname{Verteiler}%
                                                                   % oder: Kopien an
                    49
                        \def\headtoname{An}%
                        \def\pagename{Seite}%
                    51
                    52 \def\seename{siehe}%
                    53 \def\alsoname{siehe auch}%
                    _{54} \def\proofname{Beweis}%
                        \def\glossaryname{Glossar}%
                    The macro \captionsngerman is identical to \@captionsngerman, but only defined if
  \captionsngerman
                    ngerman is requested.
                    57 \def\bbl@tempa{ngerman}
                    58 \ifx\CurrentOption\bbl@tempa
                    59 \@namedef{captionsngerman}{%
                           \@nameuse{@captionsngerman}%
                    61 }
                    62\fi
                   The macro \captionsnaustrian builds on \@captionsngerman, but redefines some strings
\captionsnaustrian
                    following Austrian conventions (for the respective variants, cf. [1]).
                    63 \def\bbl@tempa{naustrian}
                    64 \ifx\CurrentOption\bbl@tempa
```

```
65 \@namedef{captionsnaustrian}{%
      \@nameuse{@captionsngerman}%
      \def\enclname{Beilage(n)}%
67
68 }
69\fi
```

\captionsnswissgerman

The macro \captionsnswissgerman builds on \@captionsngerman, but redefines some strings following Swiss conventions (for the respective variants, cf. [1]).

```
70 \def\bbl@tempa{nswissgerman}
71 \ifx\CurrentOption\bbl@tempa
72 \@namedef{captionsnswissgerman}{%
      \@nameuse{@captionsngerman}%
      \def\enclname{Beilage(n)}%
74
75 }
76\fi
```

Date localizations 3.3

\month@ngerman

The macro \month@ngerman defines German month names for all varieties.

```
77 \def\month@ngerman{\ifcase\month\or
78 Januar\or Februar\or M\"arz\or April\or Mai\or Juni\or
   Juli\or August\or September\or Oktober\or November\or Dezember\fi}
```

\datengerman The macro \datengerman redefines the command \today to produce German dates.

```
80 \def\bbl@tempa{ngerman}
81 \ifx\CurrentOption\bbl@tempa
82 \ \def\datengerman{\def\today{\number\day.~\month@ngerman}}
        \space\number\year}}
83
84\fi
```

\datenswissgerman

The macro \datenswissgerman does the same for Swiss German dates. The result is identical to German.

```
85 \def\bbl@tempa{nswissgerman}
86 \ifx\CurrentOption\bbl@tempa
87 $$ \def\datenswissgerman{\def\today{\number\day.~\month@ngerman} }
        \space\number\year}}
88
89\fi
```

The macro \datenaustrian redefines the command \today to produce Austrian versions of the German dates. Here, the naming of January ("Jänner") differs from the other German varieties.

```
90 \def\bbl@tempa{naustrian}
91\ifx\CurrentOption\bbl@tempa
   \def\datenaustrian{\def\today{\number\day.~\ifnum1=\month
      J\"anner\else \month@ngerman\fi \space\number\year}}
93
94\fi
```

3.4 Extras

\extrasngerman \extrasnaustrian \noextrasngerman \noextrasnaustrian \noextrasnswissgerman

The macros \extrasngerman, \extrasnaustrian and \extrasnswissgerman, respectively, will perform all the extra definitions needed for the German language or the respective \extrasnswissgerman variety. The macro \noextrasngerman is used to cancel the actions of \extrasngerman. \noextrasnaustrian and \noextrasnswissgerman behave analoguously.

For all German varieties, the character " is made active. This is done once, later on its definition may vary.

```
95\initiate@active@char{"}
96\@namedef{extras\CurrentOption}{%
97 \languageshorthands{ngerman}}
98\expandafter\addto\csname extras\CurrentOption\endcsname{%
99 \bbl@activate{"}}
```

Turn the shorthands off again outside of German.

```
100 \expandafter\addto\csname noextras\CurrentOption\endcsname{%
101 \bbl@deactivate{"}}
```

In order for TEX to be able to hyphenate German words which contain 'ß' (in the 0T1 position ^^Y) we have to give the character a nonzero \lccode (see Appendix H, the TEXbook).

```
\label{locode25} $$ 102 \exp Addte^addto\csname extras\CurrentOption\endcsname{% $$ 103 $$ \code25}% $$ 104 $$ \code25=25$ }
```

The umlaut accent macro \" is changed to lower the umlaut dots. The redefinition is done with the help of \umlautlow.

```
105\expandafter\addto\csname extras\CurrentOption\endcsname{%
106 \babel@save\"\umlautlow}
107\expandafter\addto\csname noextras\CurrentOption\endcsname{%
108 \umlauthigh}
```

The current version of the 'new' German hyphenation patterns (dehyphn.tex) is to be used with \lefthyphenmin and \righthyphenmin set to 2.

```
109 \providehyphenmins{\CurrentOption}{\tw@\tw@}
```

For German texts we need to assure that \frenchspacing is turned on.

```
110 \expandafter\addto\csname extras\CurrentOption\endcsname{%
111 \bbl@frenchspacing}
112 \expandafter\addto\csname noextras\CurrentOption\endcsname{%
113 \bbl@nonfrenchspacing}
```

3.5 Active characters, macros & shorthands

The following code is necessary because we need an extra active character. This character is then used as indicated in table 1.

In order to be able to define the function of ", we first define a couple of 'support' macros.

\dq We save the original double quotation mark character in \dq to keep it available, the math accent \" can now be typed as ".

```
114\begingroup \catcode'\"12
115\def\x{\endgroup
116 \def\@SS{\mathchar"7019 }
117 \def\dq{"}}
118\x
```

Now we can define the doublequote shorthands: the umlauts,

```
119 \declare@shorthand{ngerman}{"a}{\text textormath}{"a}\allowhyphens}{\ddot a}}
                                      \label{lowhyphens} $$120 \declare@shorthand{ngerman}{"o}{\text{\textormath}"{o}\allowhyphens}{\dot o}$$
                                      \label{lowhyphens} $$123 \declare@shorthand{ngerman}{"0}{\text{\textormath}("{0}\allowhyphens}{\ddot 0}$}
                                      \label{lowhyphens} $$124 \end{to:started} $
                                      {\ddot\imath}}
                                      \label{lem:index} $$129 \end{shorthand ngerman} {I}_{\text{\colored}} $$129 \end{shorthand ngerman} $$11_{\text{\colored}} $$129 \end{shorthand} $$129 \end{shor
                                      German ß,
                                      \label{localized} \begin{tabular}{l} 130 \end{tabular} $$ \end{tabular} $$$ \end
                                      131 \declare@shorthand{ngerman}{"S}{\SS}
                                      \label{localized} \begin{tabular}{l} $132 \declare@shorthand \{ngerman\} {\z} {\textormath {\ss} {\@SS{}}} \\ \end{tabular}
                                      133 \declare@shorthand{ngerman}{"Z}{SZ}
                                      German and French/Swiss quotation marks,
                                      _{134} \declare@shorthand{ngerman}{"'}{\qlqq}
                                      _{135} \declare@shorthand{ngerman}{"'}{\qrqq}
                                      _{136} \ensuremath{\mbox{declare@shorthand{ngerman}{"<}}{\hflqq}}
                                      {\tt 137 \backslash declare@shorthand\{ngerman\}\{">\}\{\backslash frqq\}}
                                      and some additional commands (hyphenation, line breaking and ligature control):
                                      138 \declare@shorthand \{ngerman\} {"-} {\nobreak \-\bbl@allowhyphens}
                                      139 \declare@shorthand{ngerman}{"|}{%
                                                   \textormath{\penalty\@M\discretionary{-}{}{\kern.03em}%
                                                                                                           \allowhyphens}{}}
                                      {\tt 143 \backslash declare@shorthand \{ngerman\} \{"\sim\} \{\backslash textormath \{\backslash leavevmode \backslash hbox \{-\}\} \{-\}\}}
                                      144 \declare@shorthand{ngerman}{"=}{\penalty\@M-\hskip\z@skip}
                                      _{145}\declare@shorthand{ngerman}{"/}{/\penalty\exhyphenpenalty\hskip\z@skip}
   \mdqon All that's left to do now is to define a couple of commands for reasons of compatibility
\mdqoff with german.sty.
                                      146 \def\mdqon{\shorthandon{"}}
                                      _{147} \def\mdqoff{\shorthandoff{"}}
```

```
148 \ldf@finish\CurrentOption
```

3.6 naustrian.ldf, ngerman.ldf and nswissgerman.ldf

Babel expects a $\langle lang \rangle$.ldf file for each $\langle lang \rangle$. So we create portmanteau ldf files for naustrian, ngerman and nswissgerman.² These files themselves only load ngermanb.ldf, which does the real work:

149 \input ngermanb.ldf\relax

Change History

Version 2.6f	Do not use \@namedef when
General: Renamed from germanb.ldf;	\noextras is already defined and
language names changed from	should not be overwritten 6
german and austrian to ngerman	General: Added support for variety
and naustrian 1	nswissgerman
Version 2.6j	Generate portmanteau files
\noextrasnswissgerman: Deactivate	naustrian.ldf,ngerman.ldf and
shorthands ouside of German 6	nswissgerman.ldf8
Version 2.6k	Revised naustrian support 1
\@captionsngerman: Added	Revised documentation: Turn the
\glossaryname4	babel manual chapter into a
\noextrasnswissgerman: Now use	self-enclosed manual 1
\providehyphenmins to provide a	Version 2.7b
default value 6	General: Omit warnÂŋing about
Version 2.6m	missÂŋing swissÂŋgerÂŋman
\noextrasnswissgerman: Turn	patÂŋterns when nswissgerman is
frenchspacing on, as in german.sty 6	not reÂŋquested 1
Version 2.6n	Version 2.8
\@captionsngerman: Corrected typo	\@captionsngerman: Define
\captionnsgerman 4	trans-variational base captions
Version 2.7	which are loaded and modified by
\@captionsngerman: Changed	the varieties 4
\enclname in naustrian to	\captionsnaustrian: Only define
Beilage(n) 4	\captionsnaustrian if naustrian
Split \captionsngerman from	is requested 4
\captionsnaustrian and	\captionsngerman: Only define
\captionsnswissgerman 4	\captionsngerman if ngerman is
\datenswissgerman: Added	requested 4
\datenswissgerman 5	\captionsnswissgerman: Only define
\noextrasnswissgerman: Added	\captionsnswissgerman if
\extrasnswissgerman and	nswissgerman is requested 5
\noextrasnswissgerman 5	\datenaustrian: Only define
Deactivate shorthands also outside	\datenaustrian if naustrian is
of naustrian and nswissgerman 6	requested 5

²For some naustrian and ngerman, this is not strictly necessary, since babel provides aliases for these languages (pointing to ngermanb). However, since babel does not officially support these aliases anymore after the language definition files have been separated from the core, we provide the whole range of ldf files for the sake of completeness.

\datengerman: Only define	General: Only add dialects if the
\datengerman if ngerman is	respective variety is loaded 3
requested 5 \datenswissgerman: Only define	Version 2.9
\datenswissgerman if	General: Add "/ shortcut for breakable
nswissgerman is requested 5	slash
